

everX Flow™

Short-Fiber Reinforced Flowable Composite for Dentin Replacement

Reinforcement where
core strength matters

Since 1921

100 years of Quality in Dental

everX Flow™ is a highly fracture resistant composite substructure which incorporates unique glass microfibers and full silane coverage technologies. Following the same principles as rebar in construction, the fibers in everX Flow™ strengthen restorations and weakened tooth structure from within to help prevent them from cracking.

everX Flow™ may be used as a dentin replacement material in bulk filling and core build-up applications. It may also be used in cases where endodontic stability must be restored; for example, in cases where amalgam fillings are being replaced and cracked dentition is present.

Courtesy of Dr Lassila, University of Turku, Finland

everX Flow™ provides an excellent foundation for your larger restorations

- Core build-up:
 - » Under indirect prostheses
 - » Including post and core substructures
- Bulk filling
- Dentin replacement
- Substructure for endodontically-treated teeth

Two shades to address all your needs

Optimal for deep posterior cavities

Optimal for more esthetic results and for core build-up

everX Flow™ Refills

Contains: One 2.0mL syringe and 20 disposable tips.
012898 Bulk Shade (Translucent) 012899 Dentin Shade

G-aenial™ Universal Injectable Unitip Refills

Contains: 150.16mL unitips.
