EXABITE® III
VINYL POLYSILOXANE BITE REGISTRATION CREAM

For use only by a dental professional in the recommended indications.

INDICATIONS
Checking occlusal registrations.

CONTRAINDICATIONS
Avoid use of this product in patients with known silicone allergies.

PRECAUTIONS
1. When extruding EXABITE III, care should be taken to avoid mixing or contact with the following materials. These may delay or prevent setting.
   - Catalyst for condensation type silicone impression material
   - Polysulfide impression material
   - Exigual materials
   - Glycerol
   - Sulfur
   - Oil
   - Latex
   - Acrylates
   - Spray-type or ointment-type topical surface anesthesia

2. Bleed a small amount of base and catalyst prior to each use, before attaching a new mixing tip, to ensure even flow from cartridge. Remove any hard materials if present. Wipe off excess from the cartridge carefully to avoid cross contamination of base and catalyst.

DIRECTIONS FOR USE
CARTRIDGE LOADING AND DISPENSING

1. Lift the release lever of CARTRIDGE DISPENSER II and pull the piston plunger all the way back into the dispenser. Lift the cartridge holder of the dispenser and load the cartridge, ensuring that the V-shaped notch on the flange of the cartridge is facing down. Push the cartridge holder down to hold the cartridge firmly in place.
2. Lift the release lever and push the piston plunger forward until it engages into the cartridge.
3. Remove the cartridge cap by rotating 1/4 turn counterclockwise.
4. Align the V-shaped notch on the rim of the MIXING TIP to the V-shaped notch between the cartridge barrels. Push firmly to attach the mixing tip.
5. Squeeze the handle several times to extrude the material. After use, do not remove the MIXING TIP as this will become the storage cap until next use. When replacing the MIXING TIP, rotate the collar on the mixing tip 1/4 turn clockwise to align the V-shaped notch on the cartridge. Tip the mixing tip downward and peel it away from the cartridge.
6. Remove the old mixing tip prior to next use. Before attaching a new tip, gently extrude a small amount of material to ensure that base and catalyst are flowing evenly from both openings. If the materials should fail to extrude, remove any hardened materials from the end of the cartridge.
7. To replace the cartridge, lift the release lever and retract the piston plunger fully. Remove the empty cartridge by lifting the cartridge holder and load a new one into the dispenser.

Occlusal Registration for Prostheses
1. Instruct the patient to occlude into the centric position. Inject material into a space between the opposing tooth and the abutment tooth from the buccal side.
2. When taking an occlusal registration, inject material onto the occlusal surface, then let the patient occlude. NOTE:
   1) To reduce the potential for improper model articulation, inject material onto the occlusal surfaces on both sides of the arch.
   2) The working time may be as little as 15 seconds when the material is injected directly into the mouth (35°C/95°F).
3. Remove the registration from the mouth. Trim undercuts and excess material using a sharp knife. After trimming, make sure that the registration fits the prepared working models and articulate the case as necessary. NOTE: Use only a sharp knife to trim the material. The use of scissors might fracture the bite registration.

Registration of Checkbite
Using EXABITE III, it is possible to record bite registration in eccentric positions with the jaw moved forward, right, left, and to the center respectively.

DISINFECTION
Rinse off with running water. Liberally apply neutral detergent using a pump or spray bottle. Then rinse vigorously under running tap water. The impression can be disinfected with a 0.5% sodium hypochlorite solution or other appropriate disinfectants. Refer to the respective manufacturer’s instructions for use.

CAUTION
1. Avoid contact of base, catalyst or mixed material with eyes. In case of contact with eyes, flush immediately with water and seek medical attention.
2. The obtained bite registration should be cleaned then disinfected, utilizing a 2.5% or 3.4% glutaraldehyde, or other appropriate disinfectant, according to the manufacturer’s label recommendations.
3. Avoid getting material on clothing as it is difficult to remove.
4. Mixing tips are for single use only. To prevent cross contamination between patients, do not reuse the mixing tip. The mixing tip cannot be sterilized in an autoclave or chemclave.
5. In rare cases, the product may cause sensitivity in some people. If any such reactions are experienced, discontinue the use of the product and refer to a physician.
6. Personal protective equipment (PPE) such as gloves, face masks and safety eyewear should always be worn.

STORAGE
Store in a dry location at normal room temperature (15-25°C; 59-77°F).

PACKAGE
Cartridge 81 g (40 ml) x 2
MIXING TIP S (Pink) x 3
MIXING TIP S (Aqua) x 3
(For Minimum Mixed Volume 86 ml)

Option:
1. CARTRIDGE DISPENSER II piece
2. MIXING TIP II 60 pieces
