

The irresistible duo

GC Tooth Mousse™ Milkshake and Chocolate are two NEW, irresistible flavours your patients will love!

Tooth Mousse™ contains calcium and phosphate, the major minerals teeth are made from. Because calcium and phosphate are carried in a special milk-derived protein called RECALDENT™ (CPP-ACP), they are available in a soluble form, protecting teeth by neutralising acids, and suppressing tooth demineralisation and enhancing remineralisation. This means GC Tooth Mousse™ provides extra protection for teeth, protecting against acid producing bacteria, acidic foods and drinks, post-whitening tooth sensitivity, and enamel erosion that can lead to tooth decay.

GC Tooth Mousse™ is fluoride free and provides teeth with daily extra protection for people of all ages, including children and people who depend on carers, and those who are more susceptible to caries.
