Are you looking for the answer how to choose between direct or indirect restorations in the anterior region, or do you ask yourself the question whether posts are still needed in endodontics, how isolation is best taken care of, how to take care of cracked teeth or look for tissue saving restoration techniques of deep caries lesions? Ten distinguished clinical experts will present their views on these topics based on tangible clinical cases, guiding you through the various options, ensuring that all practical aspects are kept in focus.

You can watch the webinars on demand after the event.
