The art of teamwork

initial™ LiSi: the fast lane to outstanding results

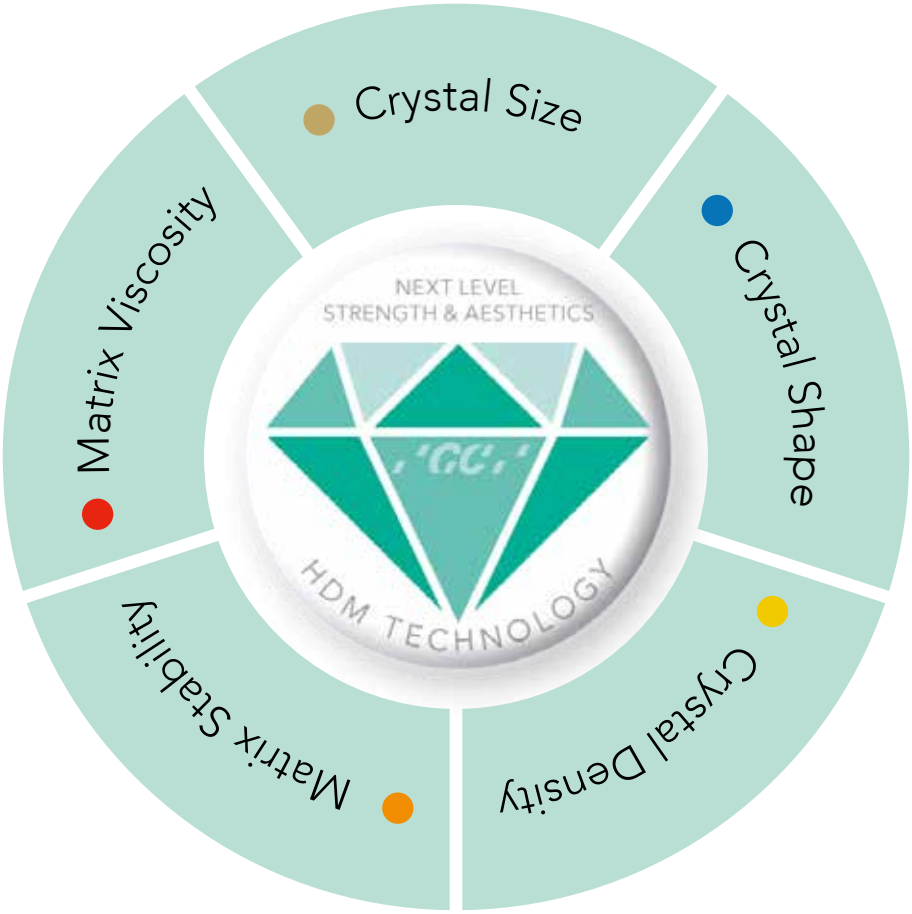
Smile for the World

Since 1921

100 years of Quality in Dental

initial LiSi: redefined lithium disilicates

Dentists and dental technicians, they all love working with Initial LiSi Block and LiSi Press



that provide benefits for everyone.

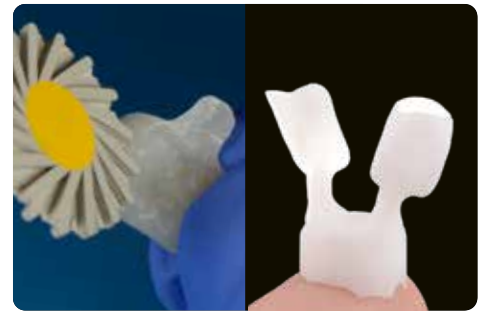
Exceptional aesthetics

HDM technology for lasting beauty
- Excellent polishability (also intraorally)
- Excellent wear resistance
- ... and beautiful opalescence!

Timesaving

HDM technology for efficiency
Initial LiSi Block
- Milled with ease
- Glazing is optional

Initial LiSi Press
- Virtually no reaction layer



Marginal quality

HDM technology for high precision
- Resistant to marginal chipping, whether pressed or milled
- Excellent marginal integrity

Combine with *initial*™ IQ ONE SQIN

The fast lane to outstanding results
- Maximal effect within a ceramic micro-layer
- Add gloss, colour nuances and fluorescence in easy and fast steps
- Self-glazing effect

Initial LiSi's aesthetics

The careful orchestration of structural refinement, optical enhancement, and inherent opalescence of Initial LiSi ceramics collectively ensure the most aesthetically pleasing outcome.

Initial LiSi Block, just polished. Courtesy Dr J. Tapia Guadix, Spain

"I can't recommend GC's LiSi Blocks enough for creating stunning veneers. Their high strength and lifelike aesthetics have revolutionised my lab's workflow. The exceptional translucency and colour blend effortlessly with natural dentition, ensuring consistently beautiful results. Plus, the ease of milling and polishing has significantly boosted my productivity. Try them, and you'll never look back!"

The impeccable synergy within the entire Initial product line provides a highly efficient approach to achieving extraordinary results

Together with ONE SQIN, you can achieve even more

Buccally reduced (0.3 mm) Initial LiSi framework

Add colour and fluorescence with **Initial IQ Lustre Pastes ONE**

Add gloss and texture with **Initial IQ SQIN**

Outstanding result in a minimum of time

"The components of the system are perfectly matched to each other, which leads to safe, fast and precise results. The warm shades of LiSi Press and the different indication-related translucency levels enable to create a seamless transition to natural structures."

MDT Stefan Roozen, Austria

Initial LiSi lithium disilicates and Initial IQ ONE SQIN form a harmonious union, amplifying their individual strengths and elevating your restorations to the highest level.

Initial LiSi's efficiency

Press or mill? Save time either way

Initial LiSi Press: easy divesting with virtually no reaction layer

Time saved: Between 15-20 minutes.*
No need for hydrofluoric acid.

Conventional lithium disilicate press ceramic system

Courtesy of
ZTM Carsten Fisher,
Germany

Initial LiSi Block: easy to mill and the same strength without firing

Time saved: 28% of total processing time.*
No need for crystallisation firing.

Conventional lithium disilicate blocks

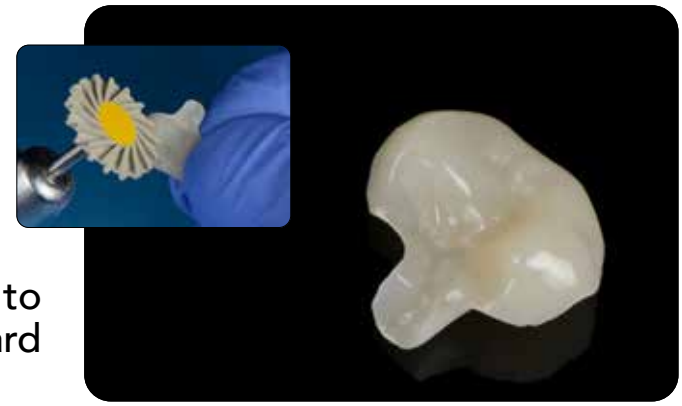
*Under testing conditions based on IFU.



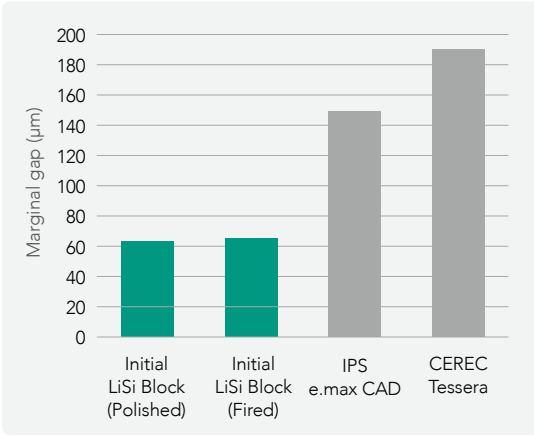
A time-efficient approach to achieving the highest standard

"Even though I love to characterise Initial LiSi Block, it is perfect to polish with only a few actions and in max. 5 minutes. Therefore, it´s a real and quick chairside solution."

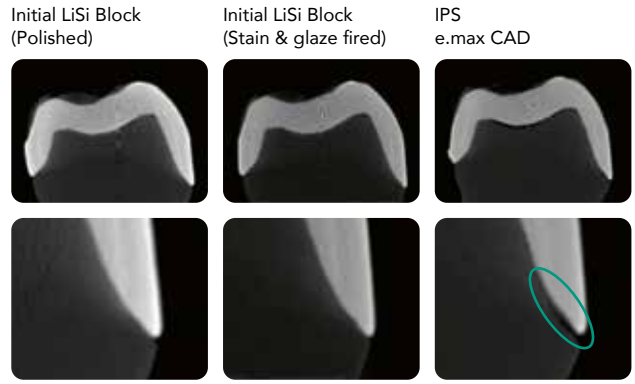
Dr Andreas Kurbad, Germany

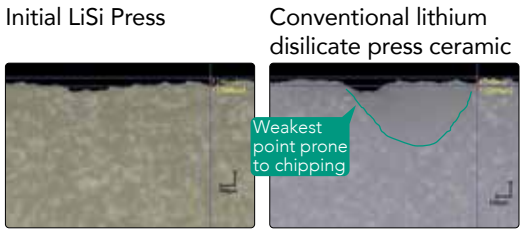
Initial LiSi's precision

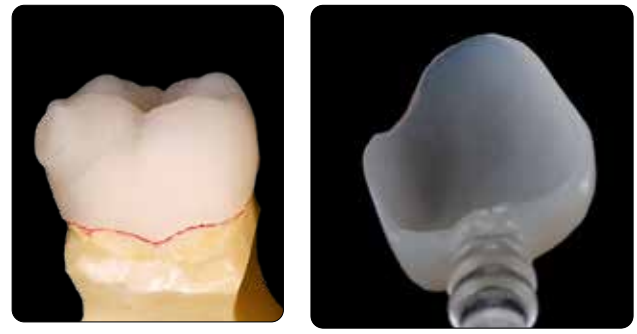
Accurate margins for long-term results



Source: GC R&D, Japan, Data on file







"In addition to the very convincing fine margins of the restorations, which I milled myself, the cooperation with the materials science department in Munich, who published very positive results regarding surface and flexural strength, also played a certain role."

Dr Gertrud Fabel, Germany

Cement recommendation

- Ideal for Initial LiSi restorations
- Universal use for a high efficiency
- High bond strength
- Marginal quality for the long run
