

### everX Flow™

Short-fibre reinforced flowable composite for dentine replacement

## Strong to the core

## everX Flow from GC Strong to the core

Discover **everX Flow**, a short-fibre reinforced flowable composite designed to **replace dentine and reinforce restorations**. Following the same principle as the iron rebar in construction, the glass fibres in everX Flow strengthen restorations and **prevent them from cracking**.

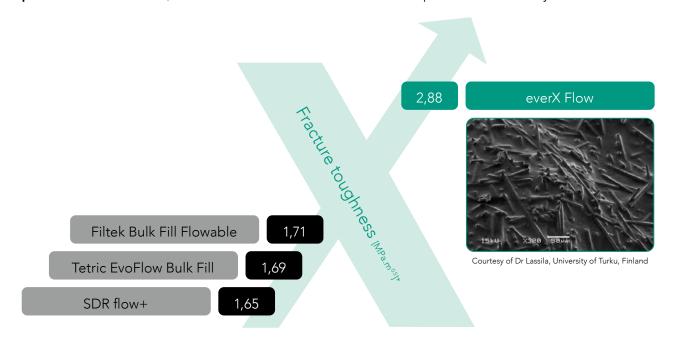

With its easy application, its two shades and its incredible strength, everX Flow is about to become your new go-to product for all your restorations in need of a strong core, as well as core build-up preparations.

## A superior fracture toughness for durable large restorations

Most composites offer perfect features for enamel replacement: high wear resistance and aesthetics. However, they are not able to equal dentine when it comes to resistance to fracture. everX Flow overcomes this issue and possesses an excellent fracture toughness close to that of dentine thanks to a high amount of short fibres strongly bonded to the resin matrix. This enables the material to efficiently reinforce large posterior restorations, in combination with a conventional composite as enamel layer.

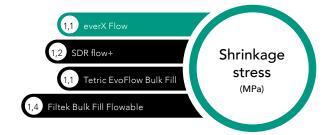

## Perfect thixotropy for an easy placement and a great adaptation

Courtesy of Dr Javier Tapia Guadix, Spain

Thanks to its optimal thixotropy, everX Flow will easily adapt to every preparation and help to avoid porosities. Its controlled flow also enables you to place it in upper molars without slumping.

### Two shades to answer all your needs

Optimal for deep posterior cavities

Optimal for more aesthetic results and for core build-up

## Optimal to reinforce large cavities and achieve long-term aesthetic results

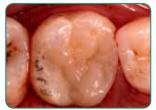

Cavity preparation

Application of **everX Flow** (Dentin shade)

Final layer with **Essentia** (Universal shade)

Post-operative situation
