

The IDEA behind the GC Dentonauts:

GC Fuji TRIAGE®
Guaranteed pain free protection

We from **GC** and our dentists care for what is best for the teeth of children. That's why we will continuously develop clever solutions for all dental needs of the youngest among us.

Practice stamp:

- (1) LM Kaste, RH Selwitz, RJ Oldakowski, JA Brunelle, DM Winn, LJ Brown. Coronal caries in the primary and permanent dentition of children and adolescents 1-17 years of age: United States, 1988-1991. J Dent Res 1996;75(special no.):631-641.
(2) LJ Brown, TP Wall, V. Lazar. Trends in total caries experience: permanent and primary teeth. JADA 2000;131(2):223-231.

The earlier, the better:
Caries protection
for the youngest
among us.

Don't wait until your child's tooth is fully erupted to start caries protection.

Why is it important to start early protection?

Erupting teeth are vulnerable to caries development because:

- The enamel is not fully matured
- A toothbrush cannot reach the areas under the gum
- 67-90 % of caries in children aged 5-17 years is found in newly erupted molar surfaces^(1,2)
- More and more children (1 out of 7) are affected by MIH. This makes their teeth, especially the first molar, very sensitive, fragile and prone to caries

Act now and ask your dentist for: Pain-free, drill-free, needle-free caries protection with GC Fuji TRIAGE.

Caries protection for your child's tooth in just three steps:

1. Clean the tooth
2. Dry with cotton wool
3. Apply GC Fuji TRIAGE

The entire treatment is done in 4 to 6 minutes
