

G-ænial™ Universal Injectable

UNIVERSAL LIGHT-CURED RADIOOPAQUE INJECTABLE COMPOSITE

For use only by a dental professional in the indications for use.

INDICATIONS FOR USE

- Direct Restorative for Class I, II, III, IV and V cavities
- Fissure sealant
- Sealing restorative areas
- Repair of (n)direct aesthetic restorations, temporary crown & bridge defect margins and margins area in enamel
- Blocking out undercut
- Liner or base
- Restoration of crowns & bridges, inlays and veneers using the indirect technique in combination with GRADIA or GRADIA PLUS components (please refer to its dedicated IFU).
- Splitting of teeth in combination with fibres such as GC EverStick fibres. Follow manufacturer's instructions.

CONTRAINDICATIONS

1. Direct pulp capping
2. Avoid use of this product in patients with known allergies to methacrylate monomer or methacrylate polymer.

COMPOSITION

Barium, dimethacrylate, initiator, pigment, silicon dioxide, stabiliser

PRODUCT DESCRIPTION
G-ænial Universal Injectable is a light-cure, radio-opaque restorative material to be used for direct restorations as type 1 and Class 2 (Group 1) per ISO standard 4049. This material has a radiopacity equivalent to 2.5 - 3.0 mm of aluminium (density is 1.9, enamel is 2.5).

The particle size of inorganic fillers range is 0.01 - 0.5 µm. The total amount of inorganic filler is approximately 46-50%.

DIRECTIONS FOR USE

- Shield patients
- Select shade from 16 shades of XBW, BW, A1, A2, A3, A3.5, A4, B1, B2, CV, CVD, AO1, AO2, AO3, AE, AE
- A, B, C, D, shades are based on Vita® Shade
- Use a registered trademark of Vita Zahnfabrik, Bad Säckingen, Germany
- Cavity Preparation

- Prepare cavity using standard techniques. Dry by gently blowing with oil free, Rubber dam is recommended to isolate the preparation from contamination with saliva, blood or sulcus fluid.
- Remove pulp, cap using calcium hydroxide.
- Bonding Treatment
- Preparation of G-ænial Universal Injectable to enamel and/or dentin, use a light-cured bonding system such as G-Premio BOND, G-ænial Bond or G-BOND. Follow manufacturer's instructions.

Placement of G-ænial Universal Injectable

- Dispensing from package
- Hold the syringe upright and remove plunger
- Remove cap by turning counterclockwise
- Prompty and securely attach the dispensing tip
- Place the light protective cap until use
- Remove cap from the dispensing tip.

- Take care not to attach the dispensing tip too tightly. This may damage the cavity preparation.
- Place the light protective cap until use
- Remove cap from the dispensing tip.
- Take care not to attach the dispensing tip too tightly. This may damage the cavity preparation.
- Place the light protective cap until use

G-ænial™ Universal Injectable

UNIVERSELLES LICHTHÄRDENDE RÖNTGENSICHTBARES NIZIERBARES COMPOSITE

Nur zur Verwendung durch zahnärztliches Fachpersonal gemäß den Anwendungshinweisen.

INDIKATIONEN ZUR ANWENDUNG

1. Direktes Restaurationmaterial für Kavitäten der Klassen I, II, III, IV und V
2. Fissurenversiegelung
3. Versiegelung oberflächennaher Bereiche
4. Versiegelung von (n)direkt ästhetischen Restaurationen, provisorischen Kronen und Brücken, Randdefekten, einer dem Rand im Schmelzzereich liegt
5. Ausbuckeln von Unliniten
6. Als Liner oder als Füllungsbase
7. Erhöhen der Land-zu-Land-Verbindungen
8. Mischindirekter Verbinder in Kombination mit GRADIA- oder GRADIA-PLUS-Komponenten (Bitte beachten Sie dazu die entsprechenden Verpackungsinstruktionen)
9. Sicherung von Zähnen in Kombination mit Glasfasern
10. Einsatz als GC EverStick. Befolgen Sie die Anweisungen des Herstellers.

Nur zur Verwendung durch zahnärztliches Fachpersonal gemäß den Anwendungshinweisen.

REINIGUNG UND DESINFIZIERUNG
Dieses Produkt ist für die Verwendung in Kombination mit einem geeigneten Desinfektionsmittel geeignet. Es ist nicht für die Verwendung in Kombination mit einem geeigneten Desinfektionsmittel geeignet. Es ist nicht für die Verwendung in Kombination mit einem geeigneten Desinfektionsmittel geeignet.

NEMALS TAUCHDESINFIZIEREN: Das Material gründlich reinigen und vor Feuchtigkeit schützen, um Kreuzkontaminationen zu vermeiden. Desinfizieren Sie nicht in einem Ultraschallbad oder in einem Autoklav. Die Sicherheit des Produkts ist nicht garantiert.

Für die Zusammenfassung der Sicherheit und klinischen Leistung (SSCP) besuchen Sie bitte die EUADAMED-Datenbank (https://www.europa.eu/growth/sectors/medical-devices/contacts_en) oder kontaktieren Sie unser Regulatory@gc-dental.

MELDUNG UNERWUNSCHTER VORKOMMENISSE
Wenn Sie bei der Verwendung des Produkts unerwünschte Nebenwirkungen oder ähnliche Vorkommnisse feststellen, unabhängig davon, ob sie in dieser Gebrauchsanweisung aufgeführt sind oder nicht, melden Sie dies bitte umgehend an das zuständige Medizinische Amt in Ihrem Land, die Sie unter dem Link https://www.europa.eu/growth/sectors/medical-devices/contacts_en oder über unsere EUADAMED-Datenbank (https://www.europa.eu/growth/sectors/medical-devices/contacts_en) auf diese Weise tragen Sie dazu bei, die Sicherheit dieses Produkts zu verbessern.

G-aenial™ Universal Injectable

UNIVERSAL LÛSHÆRNING
RØNTGENKONTRASTEREDE FLYTANDE KOMPOSIT

Før endst anvndas av tandvrdspersonal enligt indikationerna for anvndning.

INDIKATIONER FOR ANVENDNING

1. Direkta fyllningar i klass I, II, III, IV och V kaviteter
2. Fissurarforng
3. Forngning av hypersensitiva tnder
4. Reparation av (n) direkta estetiska restaurationer, temporära koronor och broar, defekter i emaljen.
5. Blöddning av tandkøttet
6. Liner eller baser
7. Underforng av lumband med indirekt teknik for kron och bro, inlåg og fasader i kombination med komponenter från GRADIA eller GRADIA PLUS (vågenlig följ respektive tillverkningsinstruktioner)
8. Splntning av tnder i kombination med fibrer, i ex GC EverStick fibre. Följ respektive tillverkningsinstruktioner.

KONTRANDIKTIONER

1. Direkt pulpaoverkapping
2. Undvik anvndning med denna produkt på patienter som har en hand allergi mot methakrylat monomer och methakrylat polymerer.

PRODUKTBESKRIVNING

G-aenial Universal Injectable er et lÛshærningde, røntgenligt flyttemateriale som kan anvndas intracanal og klassificeres som type I og klasse 2 (gruppe 1) per ISO-standard 4049. Dette materiale har en røntgenlignende tværsnit 2,5-3,0 mm av aluminium (dentin = 1 mm, emalje = 2 mm). Partikelstørrelsen på de organiska flyttematerialet varierer från 0,01-0,5 µm.

Den totale mængden organisk flyttemateriale er cirka 46 vol.-%.

INNEHÅLL

Barium glas, dimetakrylat, initiatorer, pigment, kiseldioxid, stabilisator

BRUKSANVISNING

1. Fårgval
Ved et passende fråg fra en av de 16 færgema som finns XBW, BW, A1, A2, A3, A3.5, A4, B1, B2, CV, CVD, AO1, AO2, AO3, JE, AE.
A, B, C, D færger är baserade på Vita® Shade.
*Vid et er registreret væremåder i Vita Zahnfabrik, Bad Seckingen, Tyskland.
2. Kaviteppreparation
Forbered kavitetten på sædvanligt sât. Torrlæg alle med ofjelt lÛs. Brúk av kofferdam anbefales i slytte til forebyggja kontaminering av saliv og blod i kavitet fra sâtt.
Notera:
Før pulpaoverkapping, anvnd kalciumhydroxid.
3. Bonding
Før at bonda G-aenial Universal Injectable til emalj og/eller dentin, anvnd et lÛshærningsskudningsmiddel såsom G-Prémio BOND, G-aenial Bond eller G-BOND. Följ tillverkningsinstruktionerne for disse produkter.
4. Applicering G-aenial Universal Injectable
1) Dispensering med en sprûde
Sprûdehåndtag Sprûdehûndel
LÛshæringsbottle
Fig. 1
2) Sât emalje og dentin med et sprûdehûndel.
3) Sât på lÛshæringslÛs til sâtt emalje og dentin.
Fig. 2
4) Færgema
Fig. 3
5. Avslgning
Skud det færgema.
Notera:
Før til at dreje fast spæsten for hårt på sprûden, det skal medføre at glængema forlader.
Før at sætte spæsten sâtt som den skal, se til at materialet sættes ind finns kar på sprûden.
Innan applicering, se til at kontrollere fôljende:
a. At spæsten sâtt overordentlig fast på sprûden.
b. At spæsten sâtt korrekt ved lÛs spæsten avlågnes.
Gôr dette genom att hålla sprûden med spæsten upprætad så samt pressa sprûten kovs framåt. Tryck den kolven til dens att materialet visar sig i spæstens mynnig (Fig. 2).
5. Placera spæsten så nära som muligt mot kavitetens yta, og tryk forsigtigt for kovn forvrt til att applicera materialet. Alternativt, dosera materialet hårt på et blandingsbôck og anvnd et tærmpet handinstrument.
c. Efter anvndning, avlågnes samt kaste spæsten og forvrt sprûden med et omkringvængende lÛs.
Omkringvængende lÛs kan reducera arbejdstiden.
c. Efter anvndning, avlågnes samt kaste spæsten og forvrt sprûden med et omkringvængende lÛs.

2) Dispensera fra en Unipit
Sâtt in G-aenial Universal Injectable i Unipit appliceringsstpslet eller lÛskvâdt. Avlågnes forpôrningulningen og pressa ut materialet direkt i det preparerede kavitetten. Anvnd jærntak tryk (Fig. 3). Behâll trykket på appliceringsstpslets handtag under tiden som doserens avlågnes från munnen. Dette forhindrar att Unipit sprûden sâtt som den skal.

Notera:
a. Materialet kan mulligvis vara svârt att dispensera om det dâs ut fra klykspæst perus intn anvndning. Derfor, anvnd materialet i rumstempelperat int pr minutter efter det skal anvendes.
b. Vid fôrta appliceringen, tryk lÛngsamt og gradvis for att kontrollere ekstrudering av materialet.

Kliniska Tips

Fôrskare sig om att erhålla ett jærntak sât mot ytan av byggnadsfasaden. Når ønsket mængde har appliceret, tryk tilte yttelagene på dette. Da tilkâst sprûden vinkelret sâtt fra lodret fram. Dette forhindrer at spæsten sættes komer så løst ommedelbart frân den applicerede materialet og kommer gôr ytan helt jævn.

5. LÛshærning
LÛshærda G-aenial Universal Injectable med en lÛshærningstampa. Sât til att hålla lÛsingspæst så nära som muligt. Se neden tabel for lÛsingspæst og hærningstampa.
LÛshærningstgider samt effektiv hærning (ISO 4049)

	10 sek. (high power LED) (>1200 mW/cm²LED)
	20 sek. (HalogènLED) (> 700 mW/cm²)
A1, A2, A3, B1, B2, JE, AE	2,0 mm
XBW, BW, A3.5, A4, AO1, AO2, AO3	2,5 mm
	1,5 mm

Det effektive våglingssômdrâdet for varje dentale hærningstemat måsâtte være 450-480 mm.

Notera:
a. Materialet skal appliceres sât lÛshærings i skikt. For maksimal skikttykkelse, se oven tabel.
b. For at lÛs intensitet skal være tilstrækkelig effektivt polymeriserende og senere mulig misfærgning av materialet.

c. Ved anvndning i samband med indirekt teknik, polymerisation respektive skikt under 30 sekunder med LABOLIGHT LV-III. Et andet forngningsmiddel er STEPLIGHT SL-1. Slutlig hærning udføres i LABOLIGHT LV-III under 3 minutter.

6. Finishing og Puts
Finsliser og puts i Unipit med standardteknik.
FÆRGER
XBW, BW, A1, A2, A3, A3.5, A4, B1, B2, CV, CVD, AO1, AO2, AO3, JE, AE

FÔRVÅRNING
For optimalt resultat, fôvara kâtt og môrkt (4-25°C/39,2-77,0°F).

Undvik høga temperaturer og direkt sollys.

FÔRKÅNINGAR

1. Sprûta 1,7 g (1,0 mL) x 1, 10 doseringspæstær, 1 LÛskvâdt

2. Sprûta 1,7 g (1,0 mL) x 1, Doseringspæstær x 5, 1 LÛskvâdt

3. Sprûta 1,7 g (1,0 mL) x 1, Doseringspæstær x 10, 2 LÛskvâdt

4. 30 s Doseringspæstær skikt under 3 LÛskvâdt refill

5. 30 s Doseringspæstær refill x 2 LÛskvâdt

6. Finishing og puts i Unipit 0,27 g (0,16 mL) x 15

Notera:
Før forpåkninger som findes er møjligvis intn tilgængelige i alle lândere.

CORES
XBW, BW, A1, A2, A3, A3.5, A4, B1, B2, CV, CVD, AO1, AO2, AO3, JE, AE

ARMÅZENAMENTO
Para uma ótima performance, amacizem em local fresco e escuro (4-25°C/39,2-77,0°F), protegido de temperaturas altas e luz direta do sol.

EMBALAGENS

1. Sêringas
1. Sêringa 1,7 g (1,0 mL) x 1, açulha longa para ponta aplicadora x 10, Tampa de proteção contra a luz x 1

2. Sêringa 1,7 g (1,0 mL) x 1, Ponta aplicadora x 5, guilha longa para ponta aplicadora x 5, Tampa de proteção contra a luz x 1

3. Sêringa 1,7 g (1,0 mL) x 1, Ponta aplicadora x 10, açulha longa para ponta aplicadora x 10, Tampa de proteção contra a luz x 2

4. Recarga de ponta aplicadora: Açulha longa para ponta aplicadora x 30, Tampa de proteção contra a luz x 2

5. Fôtopolimerização
Processo à fotopolimerização do G-aenial Universal Injectable com um aparelho de fotopolimerização. Mantenha a luz de luz o tempo máximo possível da superfície. Consulte o gráfico seguinte do tempo de irradiação e Profundidade de Polimerização Efetiva.

Tempo de Irradiação e Profundidade de Polimerização Efetiva (ISO 4049)

	10 seg. (Luz LED de alta potência) (>1200 mW/cm²LED)
	20 seg. (HalogènLED) (> 700 mW/cm²)
A1, A2, A3, B1, B2, JE, AE	2,0 mm
XBW, BW, A3.5, A4, AO1, AO2, AO3	2,5 mm
	1,5 mm

Sugestões de Tratamento
Para uma injeção eficaz, utilize a tensão superficial do produto para assegurar a uniformidade em toda a superfície da restauração durante a reconstrução. Depois de injetar a quantidade necessária, solte a pressão sobre o êmbolo e retire a seringa na perpendicular a superfície. Isso permite que o material se separe da ponta aplicadora e assegure uma superfície lisa no topo da restauração.

5. Fotopolimerização
Processo à fotopolimerização do G-aenial Universal Injectable com um aparelho de fotopolimerização. Mantenha a luz de luz o tempo máximo possível da superfície. Consulte o gráfico seguinte do tempo de irradiação e Profundidade de Polimerização Efetiva.

Tempo de Irradiação e Profundidade de Polimerização Efetiva (ISO 4049)

	10 seg. (Luz LED de alta potência) (>1200 mW/cm²LED)
	20 seg. (HalogènLED) (> 700 mW/cm²)
A1, A2, A3, B1, B2, JE, AE	2,0 mm
XBW, BW, A3.5, A4, AO1, AO2, AO3	2,5 mm
	1,5 mm

Notas:
a. O material deve ser aplicado e fotopolimerizado por camadas. Para a espessura máxima por camada, consulte a tabela acima.

b. Uma intensidade de luz mais baixa pode resultar numa polimerização insuficiente ou descoloração do material.

c. Na técnica indireta, consulte à fotopolimerização de cada camada durante 30 segundos com LABOLIGHT LV-III. II, ou durante 10 segundos com STEPLIGHT SL-1. Proceda à fotopolimerização final durante 3 minutos com LABOLIGHT LV-III.

6. Procedimento complexo de acabamento e de polimento
Acabar e polir usando as técnicas padronizadas.
