Fully Crystallized Lithium Disilicate

Natural beauty restored

Natural beauty restored

Initial LiSi Block: strength, precision and aesthetics in a fully crystallised block

Initial LiSi Block is a fully crystallised lithium disilicate block that delivers optimal physical properties without firing. This unique block features the proprietary HDM (High Density Micronisation) technology for CAD/CAM dentistry to deliver high wear resistance, smooth margins and aesthetic results. When used with the ONE SQIN technique - the paintable colour-and-form ceramic system - you can quickly and easily achieve more aesthetic results.

- **Save time, as no crystallisation firing is required**
- **Durable aesthetics**
- **Seamless margins**
- **Natural opalescence**
- **An ideal base for the ONE SQIN technique**

HDM technology for CAD/CAM dentistry

In 2016, with LiSi Press, GC introduced the HDM (High Density Micronisation) technology. HDM uses equally dispersed lithium disilicate micro-crystals to fill the entire glass matrix rather than using traditional larger size crystals. The clinical efficiency of this technology has been proven after 5 years of clinical service¹.

To bring faster solutions for indirect restorations, GC has further developed the HDM technology for CAD/CAM dentistry by optimising the crystal size and glass matrix stiffness. Thanks to this new technology, good machinability, marginal integrity, polishability, and wear resistance are achieved at the same time.

Being fully crystallised before milling, high strength is present from the start, which makes additional firing not required.

Conventional lithium disilicate (IPS e.max CAD)

Smaller crystals for easy milling, high wear resistance and natural opalescence. Improved glass matrix stiffness to reach high mechanical strength.

Optimised acid and wear resistance to help preserve the aesthetics of your restorations over time. Excellent edge stability for smooth margins.

Accurate margins

Since Initial LiSi Block is already fully crystallised before milling, smooth and accurate margins are observed directly after milling. When fired after ceramic painting & glazing, this great marginal accuracy is maintained.

Colour line-up and indications

Choice of translucency in accordance with the indication

	Anterior crown	Posterior crown	Inlay	Onlay	Veneer
HT	👍👍	👍	👍👍👍	👍👍👍	👍👍👍
LT	👍👍👍	👍👍👍	👍👍	👍👍	👍

Natural opalescence

Initial LiSi Block is available in high translucency (HT) and low translucency (LT) and offers natural opalescence under any light

Choose your preferred finishing procedure

Initial LiSi Block offers reduced process time thanks to the obsolete crystallisation. This results in a time-saving process compared to conventional lithium disilicate CAD/CAM blocks. Superior gloss can be obtained in only a few minutes by polishing only.

Polishing technique

Courtesy of ZTM Carsten Fisher, Germany

“Polishing Initial LiSi Block is easy and can be done in less than 2 minutes, with a high-quality final surface finish and aesthetic appearance. The time saving compared to a glaze firing is particularly interesting.”

Dr. Christian Moussally, France

Just Mill, Paint and Place

With GC Initial IQ ONE SQIN - the paintable colour-and-form ceramic system - you can quickly and easily achieve highly aesthetic results, comparable to conventionally layered restorations but with a significant time gain.

How does it work? You choose ...

Painting technique - For all your monolithic posterior work, Initial Lustre Pastes ONE, the unique 3D paintable ceramics from GC, bring fluorescence, unsurpassed vitality and a natural glaze ... just by painting.

Micro-layering technique - For sophisticated aesthetic cases in the anterior region, the Lustre Paste ONE and the SQIN ceramic are combined offering unique application and modelling properties that will facilitate surface texturing with self-glazing properties after ceramic firing.

Function meets Aesthetics

"I'm totally excited about the natural opalescence and colour matching of the HT version of Initial LiSi Block."

MDT Christian Hannker, Germany

"I love the opalescence of Initial LiSi Block and as a consequence thereof the colour stability and perfect matching."

Cement recommendation

Adhesive luting is recommended for Initial LiSi Block. Both G-CEM ONE and G-CEM LinkForce from GC can be used for any type of indication using Initial LiSi Block.

Indications		Recommendation		
		 Dual-cure adhesive resin G-CEM LinkForce	 Universal self-adhesive resin cement G-CEM ONE	 Light-cure adhesive resin G-CEM Veneer
Veneers			 With Adhesive Enhancing Primer or G-Premio BOND	 < 2 mm
Inlays/Onlays			 With Adhesive Enhancing Primer or G-Premio BOND	 < 2 mm
