

**CERASMART™**

FORCE ABSORBING HYBRID CERAMIC CAD/CAM BLOCK

For use only by a dental professional in the recommended indications.

**INDICATIONS**

- Metal free indirect restorations: full crown, inlay, onlay, laminated veneer
- Implant supported crown

**CONTRAINDICATIONS**

- Avoid use of this product in patients with known allergies to methacrylate polymer.

**PREPARATION DESIGN**

When designing restorations, the following minimum dimensions should be maintained:

- Minimum wall thickness should be 1.5 mm, 1.0 mm at margins. Prepare margins with deep chamfer or rounded shoulder. (Figure 1)
- For inlays and onlays, all internal edges and angles should be rounded. Avoid having margins in direct occlusal contact with the opposing tooth.

Minimum thickness of the restoration should be 1.5 mm in pit and fissure areas and 1.5 mm in cusps areas.

**MILLING**

Please refer to respective instructions of the milling unit.

Select the milling program for CERASMART (GC) or composite resin block materials.

After milling, check the restoration for:

- Discolorations linked to the milling process
- Protuberances
- Cracks or chips

If the restoration is defective, discontinue the manufacture of restoration.

**FINISHING AND POLISHING**

Finish and polish with coarse and fine silicone point. DIAPOLISHER PASTE (GC) can be used for final polishing to obtain high gloss.

**NOTE:**

When adjusting or polishing the restorative, use a dust collector and wear a dust mask to avoid inhaling dust. Wear protective glasses.

**CEMENTATION**

With Sandblasting technique

- Sandblasting with 25-50µm alumina 0.15MPa/1.5bar is recommended.

2. Blow the restoration with an oil-free air syringe or clean with an ultrasonic cleaner and dry.

3. Clean with alcohol to remove oil residue.

4. Treat the surface with a silane coupling agent such as CERAMIC PRIMER II (GC).

5. Cement with an adhesive resin cement.

NOTE: Prior to using CERAMIC PRIMER II (GC) or resin cement, refer to the respective instructions for use of the manufacturer.

Without Sandblasting technique

- Treat with hydrofluoric acid (5%) for 60 seconds.

2. Wash with water spray or an ultrasonic cleaner and dry.

3. Treat the surface with a silane coupling agent such as CERAMIC PRIMER II (GC).

4. Cement with an adhesive resin cement.

NOTE: Prior to using CERAMIC PRIMER II (GC) or resin cement, refer to the respective instructions for use of the manufacturer.

2. Hydrofluoric acid is for extraoral use only and must not be applied in the oral cavity.

3. Phosphoric acid (35-37%) can also be used for the purpose of cleaning the surface, preferably scrubbing with a microbrush for 10-15 seconds.

**ADDITIONAL APPLICATION AND REPAIR**

Roughen the bonding area using diamond point or carbide bur. Apply CERAMIC PRIMER II (GC) to improve adhesion and dry the surface.

Apply a bonding agent following its manufacturer's instruction.

Proceed with the application of the chosen composite restorative material.

G-aenal Universal Flo (GC) is recommended in order to make the surface of restorative homogeneous as it consists of the same flexible nano ceramic technology as CERASMART. In this case, the intermediate use of a bonding agent is not necessary.

Alternatively, OPTIGLAZE Color (GC) is also recommended as surface characterization and glazing technique. Sandblast with 25-50µm alumina (0.15MPa/1.5bar), clean and dry. Apply CERAMIC PRIMER II (GC), dry and apply OPTIGLAZE Color (GC).

OPTIGLAZE Color (GC) can only be cured with a light-curing device with a wavelength of 400-430nm. Refer to the respective instructions for use.

**SHADE**

5 Vita shades\* available in two translucencies:

- High Translucency (HT): A1 HT, A2 HT, A3 HT, A3.5 HT, B1 HT
- Low Translucency (LT): A1 LT, A2 LT, A3 LT, A3.5 LT, B1 LT
- One bleach shade (BL)

\*Vita® is a registered trademark of Vita Zahnfabrik, Bad Säckingen, Germany.

**SIZE**

Available in 3 sizes: 12, 14, 14L

**PACKAGE**

5 blocks per box

**STORAGE** Recommended for optimal performance, store at room temperature (4-25°C / 39.2-77.0°F) away from direct sunlight and high humidity. (Shelf life: 5 years from date of manufacture)**CAUTION**

1. In rare cases this product may cause sensitivity in some people. If such reactions are experienced, discontinue the use of product and consult a physician.

The Safety Data Sheets for this product are available at <http://www.gceurope.com/download> or for North and Latin America <http://www.gcamerica.com/downloads> They can also be obtained from your supplier.

**CERASMART™**

KRAFTABSORBERENDE HYBRIDKERAMISK CAD/CAM BLOK

Må kun anvendes af dental personnel/tandlæger i de anbefalede indikationer.

**INDIKATIONER:**

- Metalfrie indirekte restaureringer: fuldkroner, inlay, onlay, laminerede facader
- Implantatstøttede kroner

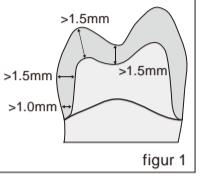

**KONTRAINDIKATIONER:**

- Undgå brugen af dette produkt hvis patienten har kendte allergier mod methacrylatepolymer.

**PRÆPARATIONENS UDFORMNING**

Når restaureringen udføres skal følgende dimensioner respekteres:

- Minimum vægtyskelse skal være 1,5 mm. 1 mm i kantområder.
