

G-ænial™ A'CHORD

Advanced Universal Composite

Simplicity, aesthetics and performance in your hands

Since 1921
100 years of Quality in Dental

G-ænial A'CHORD Revolution from GC

With more than 100 years of experience in serving dentistry and **over one billion composite restorations worldwide**, GC introduces its proprietary **High-performance Pulverised CERASMART (HPC) filler** and **Full-Coverage Silane Coating (FSC)** technologies with its latest universal composite G-ænial A'CHORD which brings together simplification, invisible fillings, natural fluorescence and **advanced technologies in one syringe**.

A'CHORD Simplification

- simplified unishade system
- simplified handling
- simply universal

A'CHORD Aesthetics

- natural fluorescence
 - long-lasting gloss
 - extreme challenges

A'CHORD Revolutionary Technology

- proprietary filler and coating
- high stain and wear resistance
- excellent radiopacity

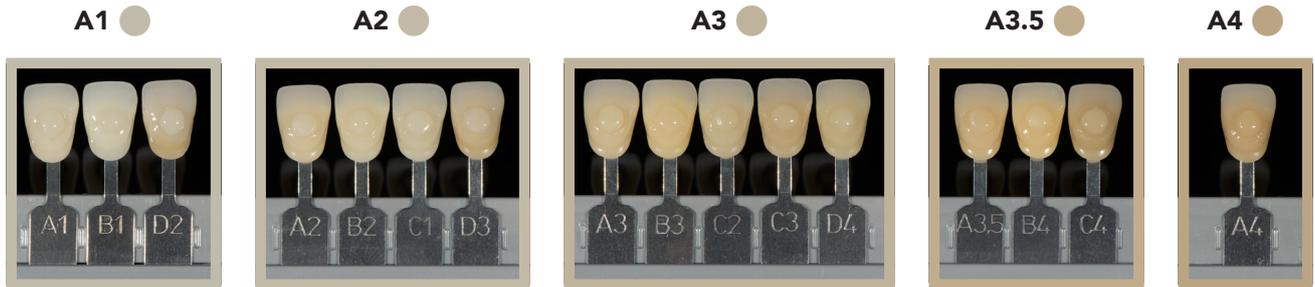

G-ænial A'CHORD is a **universal composite that delivers long lasting, invisible restorations**. Designed to save time and therefore costs, it brings together superior technology in a straightforward product. Now you can feel truly confident using a material with **effortless handling** even in challenging cases.

Impress your patients with this simplified solution.

A'CHORD Simplification

Simplified unishade

G-æniel A'CHORD always delivers more: a simplified unishade system of **5 core shades** that achieves the aesthetics of the 16 classic Vita shades **with ease**. With this reduced inventory, you will save time and costs. Its unique filler technology mimics natural light reflection resulting in impressive invisible restorations.

Simplified handling

G-æniel A'CHORD provides consistently simplified handling, whether sculpting with a hand instrument or using a brush. This is enabled by the non-sticky Bis-MEPP monomer and optimised filler-monomer combination of proprietary FSC and HPC technology (GC data on file).

Simply universal

G-æniel A'CHORD offers the combination of aesthetics and strength for both anterior and posterior restoration in one straightforward package.

A'CHORD Aesthetics

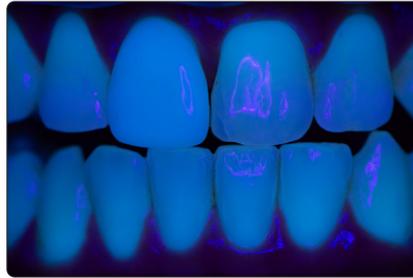

Natural fluorescence

G-ænial A'CHORD creates a **beautifully invisible and naturally fluorescent** end result under any lighting conditions, including black light, giving patients a **truly confident smile**.

Long-lasting gloss

G-ænial A'CHORD **polishes exceptionally** and **retains a high gloss** thanks to its specialised proprietary technology with uniform nano-filler distribution and high filler load.

Time-saving results: The remarkable high gloss achieved with minimal polishing.

Invisible aesthetics even for extreme challenges

In addition to its 5 core shades G-ænial A'CHORD extends its portfolio with 2 cervical shades for elderly patients, 3 opaque for masking discolouration, 2 enamel for life-like translucency and 2 bleach shades for brighter smiles, thus making it possible to create invisible fillings even for extreme challenges.

A'CHORD Revolutionary Technology

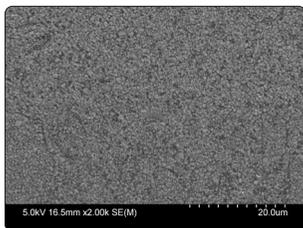

Proprietary filler and coating

G-ænial A'CHORD represents another significant step forward in the advancement of composite materials. It is the combination of two remarkable proprietary technologies created by GC; **Full-Coverage Silane Coating (FSC)** and **High Performance Pulverised CERASMART (HPC)**. The result? The ideal synergy between advanced physical properties such as wear resistance*, gloss retention* and low discoloration¹ with simplified handling, providing the clinician excellent adaptation to the cavity preparation. Reducing placement time, it provides excellent marginal integrity and consistently yields natural-looking restorations!
