

GC Tooth Mousse™ / GC Tooth Mousse™ Plus

Topical crème with calcium and phosphate

Brush.
Floss.
Mousse.

Since 1921
100 years of Quality in Dental

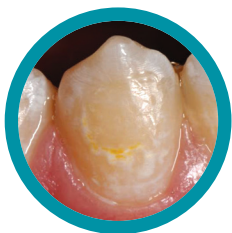

Protect and brighten your smile, everyday!

Over time, teeth can lose essential minerals and weaken due to frequent exposure to acidic foods and drinks, plaque bacteria, whitening treatments, certain medical conditions, or the natural aging process. Regular use of GC Tooth Mousse™ / GC Tooth Mousse™ Plus helps restore lost minerals, strengthen teeth, and maintain a healthy oral environment.

Applications

**Daily
prevention**

**Prevention of
tooth decay**

**Tooth
sensitivity**

**Children* and
adolescents**

**During and after
orthodontics (braces
and clear aligners)**

reflux and morning sickness**

**Dry mouth conditions
and Xerostomia**

**Dental developmental
defects and chalky teeth**

**Chronic disease sufferers
and certain medication-
related oral side effects**

**Oral care support for aged
care and special needs**

Directions for use

You should discuss with your dentist how often and for how long you should apply GC Tooth Mousse™ / GC Tooth Mousse™ Plus. Application should occur after brushing teeth. In most situations, morning and night application is advised.

1

Squeeze a pea-size amount of GC Tooth Mousse™ onto a clean finger.

2

Apply to all teeth with a clean finger and use your tongue to spread around evenly.

3

Leave GC Tooth Mousse™ on teeth for a minimum of 3 minutes avoiding spitting out and swallowing. For a more effective result, allow GC Tooth Mousse™ to remain in contact with your saliva for an additional 1–2 minutes.

4

Spit out excess. Any GC Tooth Mousse™ remaining on the surface can be left to gradually dissipate. Avoid rinsing, and do not eat or drink for 30 minutes following application.

Prevent.
Remineralise.

Why choose GC Tooth Mousse™ / Tooth Mousse™ Plus?

Your teeth need essential minerals every day to stay strong and healthy!

GC Tooth Mousse™ and **GC Tooth Mousse™ Plus** are delicious-tasting tooth crèmes designed to help support enamel health by replenishing essential minerals lost during everyday acid attacks from food and drinks. They help maintain a healthy oral environment and complement your daily oral care routine.

GC Tooth Mousse™ is a fluoride-free tooth crème that contains RECALDENT™(CPP-ACP), a unique milk-derived ingredient that delivers calcium and phosphate, the essential minerals that help protect and strengthen tooth enamel. It is suitable for people of all ages, including children, and can be used as a fluoride-free addition to daily oral care.

GC Tooth Mousse™ Plus contains the same enamel-supporting ingredients found in GC Tooth Mousse™, with the addition of fluoride (900 ppm) for extra protection. By providing calcium, phosphate, and fluoride, it helps strengthen tooth enamel and supports a healthy balance of bacteria in the mouth, contributing to healthy teeth and gums. It is recommended for adults and children aged 6 years and above.

What is RECALDENT™ (CPP-ACP)?

Nature has developed highly efficient protein systems in saliva, blood and milk that stabilise and transport calcium and phosphate, which are the fundamental building blocks of our teeth and bones. Cow's milk is recognised as having the most effective system for delivery of calcium and phosphate. Extensive research over the past 25 years has refined the specific milk protein which transports these essential minerals to help protect our teeth – Casein Phosphopeptide Amorphous Calcium Phosphate – otherwise known as RECALDENT™ (CPP-ACP).

Important: GC Tooth Mousse™ and GC Tooth Mousse™ Plus contain milk-derived proteins and are not suitable for people with a milk protein or hydroxybenzoates allergy.

GC Tooth Mousse™ / GC Tooth Mousse™ Plus comes in individual tubes in a variety of delicious flavours.

GC Tooth Mousse™

Available in 7 different flavours: Strawberry, Vanilla, Melon, Mint, Tutti Frutti, Milkshake and Chocolate

GC Tooth Mousse™ Plus

Available in 3 different flavours: Strawberry, Vanilla and Mint
